## **B. IT Services**

---

### **i. Customized Software Development**

SORCIM Technologies (Pvt.) Ltd has full range of skills to deliver cutting edge customized software solutions ranging from e-commerce portals to enterprise level Management Information Solutions (MIS). Our expertise lies in perceiving the business goals & Model of customers evidently, providing State-of-The-Art technologies, designing and developing solutions by using Best Software and Project Management Practices in order to meet the Customer's immediate Business and Technology needs.

Our consultants and software experts provide you customized software solutions according to your requirement in order to promote customer confidence and give competitive edge in the business world. We understand core business principles and our highly skilled and qualified software development team focuses on the development of new and novel customized applications as per the specific business needs of any organization.

### **ii. System Integration**

Globalization has remarkable impact on today's businesses environment which makes organizations to sense the need of moving to state-of-the-art IT enabled solutions to survive and participate in the competitive market. SORCIM Technologies (Pvt.) Ltd SI experts combine existing and new technologies together with proven processes providing the best possible platform to suit any organizations business needs.

SORCIM Application Integration Service Division consultants, after getting the Breadth and Depth of Customer's existing Business Environment and Infrastructure, may advise to employ third party software if they believe that is the best possible solution or if the Customer is already using IT solution but because of its business expansion requires enhancement in its existing system then instead of suggesting a complete new system, our Consultants may suggest to develop a part of system which will be covering the enhanced business requirement and integrating it with the existing system in order to minimize risk, cost, time and deliver complete system integration solutions and services addressed to your distinctive business needs.

### **iii. System Re-Engineering**

Mostly, Enterprises are using software application developed in old technologies (COBOL, FOXPRO etc) ad-hoc methodologies, hardware, operating systems subject to higher cost of maintenance, technology limitations, lack of vendor support, and lack of skilled resources for support & maintenance etc. The result is a legacy system that lacks the ability to evolve to meet ever-changing demands in a cost-effective manner. Organizations are continuously modernizing their enterprise technology landscape to keep up with the changing business environment.

SORCIM Technologies (Pvt.) Ltd Application Re-Engineering Division Experts helps the organizations to migrate/reengineer their legacy system into new technology i.e. Open Source and .NET including service oriented architecture based applications (Client/Server and n Tier Architecture) to achieve alignment of business and IT processes and lower the total cost of ownership of their solutions.

### **iv. Technology Outsourcing**

SORCIM Technologies (Pvt.) Ltd is a leading IT outsourcing/off-shore development company providing effective solutions/services to clients interested in outsourcing or off-shore development. We strive to provide quality, excellence and latest technology to deliver all your IT outsourcing needs tailored as per client's requirement, enabling you to save the overheads of development and deployment. We have excellent record in successfully delivering various software projects in latest technologies, on schedule and within the committed Timeline. Our outsourcing offering includes: Custom Software Development, Web Portal Development, Transformation of Legacy Systems into New Technologies and Platforms etc.

### **v. Web Development**

SORCIM Technologies (Pvt.) Ltd has vast experience of providing solutions and developing various E-Commerce applications which include: Web Portal Development, Business to Business, Business to customer and Customer to customer solutions. These solutions have been developed with latest technologies i.e. PHP, .Net, PERL, Java Scripting, MySQL, SQL Server etc and have the flexibility to be integrated with a company's existing business systems.
